Introduction

The HFMA has worked in partnership with NHS England to produce an NHS value and efficiency map which recognises the importance of a value-based approach to enabling the delivery of high-quality sustainable healthcare services.

The challenge of using limited resources to effectively deliver high quality healthcare remains constant against the ever evolving political and economic landscape that NHS organisations operate within. Prior to the Covid-19 pandemic the National Audit Office (NAO) issued a series of reports¹ on the financial sustainability of the NHS in which they stated *‘To be sustainable, the NHS needs to manage patient demand (including how long patients wait) and the quality and safety of services within the resources given to it.’*

There is inconsistency in the language used to describe these challenges, with terms such as sustainability, productivity and value used interchangeably. But regardless of language, what is clear is that sustainability requires finance, clinical teams and informatics to work collaboratively both within individual organisations and across health and social care partnerships. Provision of high-quality services to improve population health and wellbeing is synonymous with efficient and sustainable use of resources and the moral imperative to reduce health inequalities is backed by growing evidence that there is a ‘cost of doing nothing’ which must be addressed. This approach is embedded in law by the Health and Care Act 2022² via a new duty for organisations to deliver against the ‘triple aim’ of improving (a) health and wellbeing, (b) the quality of services, and (c) efficiency and sustainable use of resources.

Establishment of integrated care boards (ICBs) in July 2022 signalled the start of formal working partnership to meet system-wide financial duties but this is being embedded at a time when systems continue to feel the impact of the Covid-19 pandemic plus the cost of living crisis, with significant challenges to financial sustainability at the same time as increasing operational pressures.

This map is a reference document for those involved in influencing the use of resources and ensuring delivery of the sustainable healthcare services. The intended audience is wide-ranging including finance staff, informatics teams, clinical staff, service managers and both executive and non-executive board members. The document is structured to signpost users to resources relevant to their individual areas of interest. Most references only appear once in the document. Where material is relevant to more than one heading it has been added to the section deemed most appropriate or added multiple times.

The map will be updated periodically as new guidance, case studies and resources are produced. Additions to the map since the last update are marked as  , even if it is not a newly published resource. If you would like to flag additional material to be included in the next update of this map, please contact policy@hfma.org.uk.

Some of the resources listed are freely available, while others have restricted access. Where there is a restriction on access, further detail about obtaining access is provided in the ‘further information’ section at the end of the map.

This forms part of a suite of maps including *NHS corporate governance map; Integrated care system finance and governance guidance map; Mental health guidance and resources map; NHS environmental sustainability guidance map; and Health inequalities data sources map.*

² UK Parliament, *Health and Care Act*, 2022

Explanation of terms

This section defines the terms that are commonly used in relation to the value and efficiency agenda. In addition, the HFMA has released a briefing with more detail aimed at helping stakeholders understand the terms.³

Term	Definition and further information
Cash releasing and non-cash releasing savings/benefits	<p>Cash releasing benefits reduce the cost of the care model so that the resources can be completely re-allocated elsewhere, or the cost can be removed from a budget, for example reduced number of healthcare staff required.</p> <p>Non-cash releasing benefits provide economic value through savings from increased efficiency and effectiveness, and can free up capacity, but they do not release cash, for example reallocation of staff time.</p>
Cost improvement plans/programmes (CIPs)	<p>Cost improvement plans/programmes set out how an NHS organisation is going to save money while maintaining the quality of the services it provides and are required to close the gap between the level of revenue received and the expenditure incurred in any one year. The terms are widely understood as the mechanism by which NHS organisations account for the efficiency targets set annually by NHS England. CIPs are sometimes called waste reduction or efficiency programmes.</p>
Cost reduction and cost avoidance	<p>Cost reduction arises from providing a service at the same or better quality for a lower unit cost, through new ways of working that eliminate excess costs. The costs that are reduced could be ongoing or future pay or non-pay expenditure. A simple example is the use of a different orthopaedic prosthesis offering the same or improved clinical quality for a lower unit cost. Cost reduction savings are typically savings that are cash-releasing. Cash can be released on a recurrent, ongoing basis (if, for instance, staff costs are reduced) or a one-off, non-recurrent basis.</p> <p>Cost avoidance is a type of cost reduction which refers specifically to preventing future costs arising. Cost avoidance measures may involve some expenditure but at a lower level than the expected future costs to be avoided. As a result cost avoidance is generally non-cash releasing. Examples include the avoiding use of locum doctors by making substantive appointments and increasing the use of nursing bank staff to avoid higher cost agency premium pay.</p>

³ HFMA, *Financial sustainability: understanding the terms used*, August 2023

Term	Definition and further information
Costing	<p>Costing is about quantifying, in financial terms, the value of resources consumed in carrying out an activity.</p> <p>Patient-level information and costing systems (known as patient-level costing or PLICS):</p> <ul style="list-style-type: none"> • brings together healthcare activity information with financial information in one place • costs the actual care an individual patient receives using costing standards developed by NHS England • provides detailed information about how resources are used at patient-level, for example, staff, drugs, diagnostic tests
Economy, efficiency and effectiveness	<p>The National Audit Office uses three criteria to assess the value for money of government spending, for example the optimal use of resources to achieve the intended outcomes⁴:</p> <p>Economy: minimising the cost of resources used or required inputs – spending less (<i>for example, securing a better price for a medical device</i>)</p> <p>Efficiency: the relationship between the output from goods or services and the resources to produce them – spending well (<i>for example, delivering more healthcare activity with the same number of clinicians</i>)</p> <p>Effectiveness: the relationship between the intended and actual results of public spending (outcomes) – spending wisely (<i>for example, consuming the same resources for a healthcare intervention with better outcomes, or delivering the same outcomes with fewer resources</i>)</p>
 Financial sustainability	<p>There is no single definition of financial sustainability. In a series of reports on the financial sustainability of the NHS, the National Audit Office (NAO) used this statement⁵: 'To be sustainable, the NHS needs to manage patient demand (including how long patients wait) and the quality and safety of services within the resources given to it.'</p>
Health inequalities	<p>Health inequalities are avoidable, unfair and systematic differences in health between different groups of people. These differences may be in health status (<i>for example, life expectancy</i>); access to or quality of care; behavioural risks (<i>for example, smoking rates</i>) and wider determinants of health. Different groups of people are affected based on factors including socio-economic status; geography; social exclusion and characteristics protected in law (<i>for example, sex, ethnicity or disability</i>)</p>

⁴ National Audit Office, *Assessing value for money*

⁵ National Audit Office, *NHS financial management and sustainability*, February 2020

Term	Definition and further information
Outcomes	There is no standard definition for health outcome. Australia's New South Wales Health Department describes a health outcome as 'change in the health of an individual, group of people or population which is attributable to an intervention or series of interventions.' Outcomes include patient-reported measures about patients' care and specific data about the efficacy of the treatment patients receive in addressing their condition. ⁶
Population health	<p>Population health is an approach aimed at improving the health of an entire population and requires working with communities and partner agencies. It is about improving physical and mental health outcomes, promoting wellbeing and reducing health inequalities across an entire population, with a specific focus on the wider determinants of health (things like housing, employment, education).</p> <p>Population health management improves population health by data driven planning and delivery of proactive care to achieve maximum impact. It includes segmentation, stratification and impactability modelling to identify local 'at risk' cohorts – and, in turn, designing and targeting interventions to prevent ill health and to improve care and support for people with ongoing health conditions and reducing unwarranted variations in outcomes.</p>
Productivity	Productivity measures how many units of output are produced from one unit of inputs – and so improved productivity is a means to achieve greater efficiency. ⁷
Quality, innovation, production and prevention (QIPP)	<p>The Quality, Innovation, Productivity and Prevention (QIPP) challenge was first introduced in 2009 as an umbrella term to describe an NHS approach at local, regional and national levels to reform operations and design services in the light of the economic climate at that time. QIPP targets were issued through strategic health authorities and delivery supported through national workstreams.</p> <p>Whilst the national workstreams ceased in March 2013, the term has continued to be used coterminous with cost improvement in the NHS Standard Contract up to and including 2021/22 and continues to be used as a term to describe the required efficiency savings in some NHS organisations.</p>
Unwarranted variation	Unwarranted variation is variation in the way that health services and care are delivered that cannot be explained by differences in patient illness or patient preferences and offers no improvement in outcomes or experiences for individuals or populations. ⁸
Value	Value is concerned with the delivery of the best quality of care possible within the resources available.

⁶ HFMA, *Introduction to health outcomes*, October 2016

⁷ UK Government, *The Government Efficiency Framework*, July 2023

⁸ Nursing Times, *Exploring unwarranted variation through the RightCare programme*, 2018

Term	Definition and further information
<p>Value equation</p>	<p>The notion of value in healthcare is largely based on the work of Professor Robert Kaplan and Professor Michael Porter of Harvard Business School in the US. They define value as the ‘health outcomes achieved that matter to patients relative to the cost of achieving those outcomes’. This is often referred to as the value equation or technical value.</p> <div data-bbox="1025 316 1659 632" style="border: 1px solid #ccc; border-radius: 15px; padding: 10px; background-color: #e6f2ff; margin: 10px auto; width: fit-content;"> <p style="text-align: center; margin: 0;">The value equation</p> <div style="display: flex; align-items: center; justify-content: center; margin: 10px 0;"> <div style="text-align: center; margin-right: 10px;">  <p>Value</p> </div> <div style="margin-right: 10px;">=</div> <div style="display: flex; flex-direction: column; align-items: center;"> <div style="background-color: #0070c0; color: white; padding: 5px 20px; border-radius: 5px; margin-bottom: 5px;">Health outcomes</div> <div style="background-color: #0070c0; color: white; padding: 5px 20px; border-radius: 5px;">Cost of delivering the outcomes</div> </div> </div> <p style="font-size: 0.8em; margin: 5px 0;">Outcomes are the health results that matter for a patient's condition over the complete pathway of care</p> <p style="font-size: 0.8em; margin: 5px 0;">Costs are the total costs of care for a patient's condition over the complete pathway of care</p> <p style="font-size: 0.7em; margin: 0;"><i>Source: Porter, Value-based health care delivery (2012)</i></p> </div>
<p>Value-based healthcare</p>	<p>The Centre for Evidence-Based Medicine defines value-based healthcare as ‘the equitable, sustainable and transparent use of the available resources to achieve better outcomes and experiences for every person.’⁹</p> <p>Allocative value or allocative efficiency describes the aim of allocating healthcare resources across the system to maximise outcomes for the whole population in the system.</p> <p>Personal value uses measures of patient opinion taking into account both patient experience and their ability to make a preference-based informed decision.</p> <p>Social (or societal) value builds on this by aiming to quantify the relative importance that people place on the changes they experience in their lives. The principles of social value provide the basic building blocks for anyone who wants to make decisions that take this wider definition of value into account, in order to increase equality, improve wellbeing and increase environmental sustainability.¹⁰</p>

Enablers for value and efficiency

This section describes the key enablers which support the NHS to improve value and efficiency.

Financial efficiency programmes

NHS organisations are expected to implement on-going efficiency plans to ensure that they can continue to deliver and improve high-quality care provision within the limited resources available. These plans may be known as cost improvement programmes or waste reduction programmes. In addition to recognising the necessary savings required to close the gap between the level of revenue received and the expenditure incurred in any one year in a single organisation, programmes may also be multi-year and/or multi-organisational.

Websites

	Monitor and Audit Commission: <i>Delivering sustainable cost improvement programmes</i> Briefing	January 2012

Clinically led service improvement programmes

There is increasing evidence that financial efficiency and clinical improvement are closely linked. Increasingly a value-based healthcare approach to service improvement is formalising this link (see section below). However it is essential that staff involved in influencing the use of resources are engaged with national and local programmes driven by clinicians and/or focussed on clinical service improvement.

Leadership and governance

Effective leadership and governance are essential to promoting a culture of value-based decision making and efficient use of resources at all levels of an organisation.

Link and description	Publication date

HFMA: Impact of culture and different organisational structures on delivering efficiency Summary of MBA research	August 2020

Value-based healthcare methodologies

Value-based healthcare is described as equitable, sustainable and transparent use of available resources to achieve better outcomes and experiences for every person. Maximising value in this context requires organisations to focus on both the health outcomes and the cost of delivering those outcomes. Methodologies for value-based healthcare promote multi-professional collaboration to achieve this aim and can effectively be applied at local department or organisational level. As integrated care systems evolve and system working becomes embedded, the same methodologies can be applied across a multi-organisation health system.

Quality improvement methodologies

Quality improvement is closely linked to value-based healthcare but focus on processes and structures, as opposed to outcomes and costs. However a systematic approach to quality improvement can support the delivery of sustainable change, resulting in both improved patient outcomes and efficiency gains.

Multi-professional collaboration

Improving value and efficiency requires organisational and system wide multi-professional collaboration. 'Organisations can only deliver effective patient care within available resources by creating an environment where working relationships between clinicians and finance teams are thriving. Clinicians are responsible ultimately for the way in which services are delivered and for committing resources.'¹³

System-wide working

Fragmented care, where healthcare organisations work in silos, leads to poorer outcomes and inefficiencies. The move to a more collaborative, integrated approach to designing, planning and delivering health services across local systems with the establishment of integrated care systems (ICSs) provides the opportunity to work with partners across health and social care and with the voluntary, community and social enterprise sectors in deliver better value.

Business intelligence

Linking cost, activity and outcome data and ensuring that data quality is robust is key to understanding the use of resources to inform value-based decision making. Consistent approaches to data collection and reporting are important for optimal use of data across systems and wider benchmarking. As well as some of the links in this section, many of the case studies listed in the map provide examples of turning data into intelligence.

Websites

- NHS England: *National Cost Collection* contains schedules of published costs from national cost collection. Trusts who submit cost data are also given access to a PLICS portal to compare their costs with other trusts
- NHS England: *Modgirfel Health System* incorporates financial and non-financial metrics enabling system wide quality and productivity benchmarking
- NHS England: *Datasets and data dashboard* access to national datasets and interactive dashboards
- NHS Business Services Authority: *Information services* reports and data for a range of primary care services
- National institute for health and care excellence: *Putting NICE guidance into practice* support and resources including efficiencies and cost saving measures
- *NHS Benchmarking Network* provides benchmarking data and reports to member NHS organisations through an annual work programme with the aim of improving patient outcomes, raising health standards and delivering quality health and care services through data excellence, benchmarking and the sharing of innovation 
- *Making Data Count* a central portal with links to all resources and forums associated with the development of the tool across the NHS

Cabinet office: Creating the right framework to realise the benefits for patients and the NHS where data underpins innovation Guiding principles and a framework to help the NHS shares data with researchers	July 2019

Opportunities to improve value and efficiency

This section focuses on some of the core areas where there are opportunities to improve value and efficiency. This includes examples of addressing unwarranted clinical variation, which improves patient care and outcomes, as well as freeing up resources. Similarly, examples of optimising patient pathways through service transformation shown how capacity can be released, while improving patient outcomes, freeing up staff time and estates, and improving efficiencies. This is vital if services are going to improve productivity while maintaining financial sustainability.

Pathway redesign across a system

As partnerships and collaboration within integrated care systems develop and mature, there is increasing opportunity for system partners to work together to redesign pathways across traditional organisational boundaries.

Reducing health inequalities

As well as the moral imperative for reducing health inequalities, the ‘cost of doing nothing’ means that tackling health inequalities also has an impact on value and efficiency. The Marmot review²⁴ published in 2010 estimated that direct treatment costs in England associated with inequality amounted to £5.5bn a year and the impact was seen most recently during the Covid-19 pandemic.

Digital technology

Digital technologies such as digital medicine, artificial intelligence and robotics have a huge potential to transform the delivery of healthcare. These technologies can empower patients to participate actively in their care, with a greater focus on wellbeing and prevention. They also support the prediction of individual disease risk and personalise the management of long-term conditions.

HFMA bitesize courses	<p>HFMA bitesize provides a range of online CPD accredited courses in healthcare business and finance, a number of which are free to all NHS staff on the ESR platform.</p>

About NHS England

From 1 April 2019 NHS England and NHS Improvement worked together as a single organisation to better support the NHS to deliver improved care for patients. They formally merged on 1 July 2022 to become NHS England, incorporating NHS Digital from 1 February 2023. The single operating model has been designed to support delivery of the *NHS long term plan*, mirroring the closer working across local health systems.

Local health systems are supported by seven integrated regional teams who play a major leadership role in the geographies they manage. They make decisions about how best to support and assure performance in their region, as well as supporting system transformation and the development of integrated care systems.

About the HFMA

The Healthcare Financial Management Association (HFMA) is the professional body for finance staff in healthcare. For over 70 years, it has provided independent and objective advice to its members and the wider healthcare community. It is a charitable organisation that promotes best practice and innovation in financial management and governance across the UK health economy through its local and national networks.

The association also analyses and responds to national policy and aims to exert influence in shaping the wider healthcare agenda. It has particular interest in promoting the highest professional standards in financial management and governance and is keen to work with other organisations to promote approaches that really are 'fit for purpose' and effective.
